

Project Design Phase-II Technology Stack (Architecture & Stack)

Date	23 June 2026
Name	Giritharan D
Project Name	An employee or students submits an innovation idea through the Innovation Hub, where it is reviewed by a reviewer and approved or rejected by a manager.
Maximum Marks	4 Marks

Technical Architecture:

Reference: <https://learn.microsoft.com/en-us/azure/architecture/>

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1	User Interface	Provides forms for users to submit innovation ideas and track their status through an easy-to-use interface.	ServiceNow Forms & Workspace
2	Idea Submission Module	Captures idea details such as title, description, category, and department and stores them securely.	ServiceNow Tables & Form Layouts
3	Business Logic	Validates user input, controls field behavior, and manages application rules based on user roles.	Client Scripts, UI Policies & Business Rules
4	Workflow Automation	Automates the review process, manager approval, notifications, and status updates.	ServiceNow Flow Designer
5	Security & Access Control	Restricts access to records and fields based on User, Reviewer, and Manager roles.	ACLs (Access Control Lists) & User Roles
6	Database	Stores innovation ideas, reviewer comments, manager approvals, and overall status information.	ServiceNow Custom Tables
7	Notification Service	Sends automatic notifications to users when ideas are reviewed or approved/rejected.	ServiceNow Notifications & Email Engine
8	Reports & Dashboard	Displays idea statistics, approval trends, department-wise reports, and overall innovation performance.	ServiceNow Reports & Dashboards

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1	User-Friendly Interface	The application provides simple and easy-to-use forms for submitting, reviewing, and approving innovation ideas.	ServiceNow Forms, Workspace & UI Builder
2	Role-Based Security	Different users (End User, Reviewer, and Manager) have access only to the fields and actions assigned to their roles.	ServiceNow ACLs, User Roles & Client Scripts
3	Workflow Automation	The application automates idea review, approval, notifications, and status updates to reduce manual work.	ServiceNow Flow Designer
4	Availability	The application is available through the ServiceNow platform, allowing authorized users to access it anytime within the organization.	ServiceNow Cloud Platform
5	Performance	The system quickly processes idea submissions, approvals, and status updates while maintaining smooth application performance.	ServiceNow Tables, Business Rules & Platform Engine
6	Scalability	The application can support a growing number of users, ideas, and approval records without affecting performance.	ServiceNow Multi-Tenant Cloud Architecture
7	Maintainability	The application is easy to update and enhance using configurable components without major code changes.	ServiceNow Studio, Update Sets & Application Scope
8	Reporting & Analytics	The system provides reports and dashboards to monitor idea submissions, approvals, department-wise performance, and overall innovation trends.	ServiceNow Reports & Dashboards
